2.3.5. The teaching learning process of the institution nurtures creativity, analytical skills and innovation among students

“EDUCATION IS THE PATH TO INNOVATION”

Our Institution plays an active role in training the faculty members through various courses. This helps the faculty to take effective measures in implementing innovative teaching technique. For better focusing and understanding, the lecture classes are timed up to 45 minutes. At the end of each lecture, interactive session for 15 minutes to know the level of perception of each topic. Microteaching is encouraged in the respective department, if the students are not able to understand and learn the subject easily and effectively. Use of analogies and 2D animations and Case-based learning is encourage by posting all the students in batches to acquaint themselves with clinical procedures.

In addition to making learning more accessible, the availability of webinars, digital libraries, and smart classroom instruction has paved the way for a better future. The effects of creative learning may be seen in anything from working on phantom heads that provide students of dentistry a virtual sense of reality to organized courses that help them broaden their horizons as healthcare professionals.

Our Dental students can benefit from reflective thinking to make reasonable decisions about their patients' care. Along with critical thinking skills, students need to develop clinical reasoning skills.

Role-plays on doctor-patient relationships and communication techniques are used to emphasize to students the value of these relationships and the necessity of good communication techniques throughout the undergraduate and post graduate program.

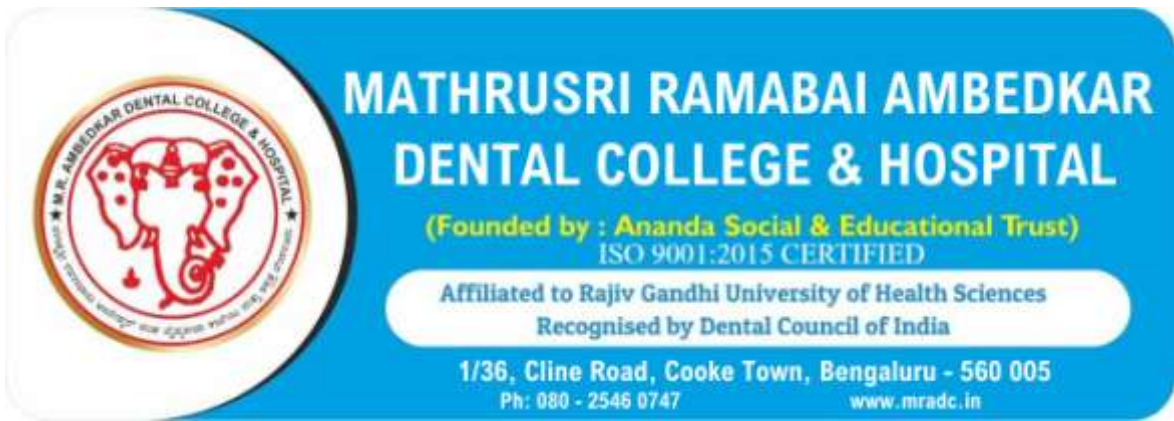

Poster and paper presentation in all scientific conferences and student conventions are encouraged, in our institution; we also advocate chart-based learning, MCQ-based instruction, and poster-based learning.

The **Institutional Review Board and Institutional Ethics Committee** scrutinizes all projects conducted in the institution. All students present their scientific studies before the Institutional Review Board and Ethical Committee; this process ensures the high standard and ethical clearance.

Students are trained in various public health related aspects like **tobacco cessation, patient counseling and other motivation skills** through the various specialty cells functioning in the institution.

Students are encouraged and guided by the teachers in our institution to promote public awareness and education posters and models related various topics on the occasions of **No-Tobacco Day, World AIDS Day, Oral Hygiene Day, Dentist Day**, and so on.

As per DCI's letter dated 03.06.2019, we wish to denote that our dental college established the Tobacco cessation center since 2010. In this center, we are training the house surgeons and PGs, giving the counseling to the 4-5 tobacco users daily. We are also conducting camps, tobacco awareness program and rallies since 2010 on occasion of World no tobacco day, every year.

Students are encouraged to come up with innovative ideas in our institution. Some of the student's innovative ideas have been submitted to **Institutional innovative council (IIC)**.
